

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	28 SEPTEMBER 2026
Team ID	SWTID-2026-4636
Project Name	AI BLOGNESTAPI
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Problem Statement

Many users want to create and manage blog content easily, but manually writing, editing, categorizing, and managing blog posts can take a lot of time. Existing blogging platforms may also contain unnecessary features and complicated interfaces.

AI BlogNest API is proposed as a simple backend system that provides APIs for creating, managing, and organizing blog content. The system can use AI-based features to assist with content generation, summarization, categorization, and improvement while providing secure user authentication and database management.

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Step 2: Brainstorm, Idea Listing and Grouping

Brainstorm, Idea Listing and Grouping AI BlogNest API	
Category	Ideas
 User Management	• User registration, login, authentication, profile management
 Blog Management	• Create, view, update and delete blog posts
 AI Features	• Generate blog ideas • Generate content • Summarize posts
 Content Organization	• Categories, tags and search
 Security	• JWT authentication, password hashing, protected APIs
 Database	• Store users, blogs, categories and AI-generated content
 API	• RESTful API endpoints for frontend or other applications
 Content Improvement	• Grammar suggestions, title suggestions and content enhancement

Step 3: Idea Prioritization

The team prioritized the ideas based on **feasibility**, **usefulness**, **security**, **implementation effort** and **project value**.

Idea Prioritization AI BlogNest API		
The team prioritized the ideas based on feasibility, usefulness, security, implementation effort and project value.		
Priority	Feature	Reason
1	 User Authentication	 Provides secure access to the system.
2	 Blog CRUD Operations	 Core functionality of the blogging system.
3	 Database Management	 Stores user and blog information.
4	 AI Content Generation	 Provides the main AI-based functionality.
5	 Categories and Tags	 Helps organize blog content.
6	 Search Functionality	 Makes finding blogs easier.
7	 Content Summarization	 Helps users understand long posts quickly.
8	 Content Improvement	 Helps improve the quality of blog content.
