

Project Design Phase
Proposed Solution Template

Date	28 SEPTEMBER 2026
Team ID	SWTID-2026-4636
Project Name	AI BLOGNEST API
Maximum Marks	2 Marks

Proposed Solution Template:

AI BlogNest API project the template content with the following:

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Bloggers and content creators often face difficulties in generating fresh content ideas, writing blog posts, organizing content, and managing multiple blog records. Manual content management can be time-consuming and difficult to maintain securely.
2	Idea / Solution Description	AI BlogNest API is a web-based backend solution that helps users create, manage, update, and organize blog content through APIs. It can support AI-assisted content generation, user authentication, and secure storage of blog information in a database.
3	Novelty / Uniqueness	The solution combines blog management with AI-assisted content generation in a simple platform. It provides secure user-based access, organized content management, and reusable REST APIs that can be connected to different frontend applications.
4	Social Impact / Customer Satisfaction	The system reduces the time and effort required to create and manage blog content. It helps students, bloggers, and content creators organize their work efficiently and provides an easy-to-use approach for managing digital content.
5	Business Model (Revenue Model)	The platform can use a freemium model , where basic blog management is available for free and advanced AI features, increased storage, and premium tools can be provided through paid subscriptions.
6	Scalability of the Solution	The system can be expanded by adding features such as AI content improvement, image generation, analytics, categories, comments, social media sharing, cloud storage, and mobile application support. The API-based architecture also allows the system to support a growing number of users.
