

Project Design Phase
Solution Architecture

Date	28 SEPTEMBER 2026
Team ID	SWTID-2026-4636
Project Name	AI BLOGNEST API
Maximum Marks	4 Marks

Solution Architecture:

Solution Architecture explains how the AI Blog Nest API is designed and how its different components work together to provide a complete solution. It helps the development team understand the system structure, technologies, data flow, and implementation process.

Goals of the Solution Architecture:

- Identify suitable technologies for developing the AI BlogNest system.
- Define how the frontend, backend, database, and AI services communicate with each other.
- Describe the main modules such as user authentication, blog creation, content management, and AI-assisted content generation.
- Define the system requirements, API structure, database design, and security mechanisms.
- Organize the development process into clear stages for easier implementation and maintenance.
- Ensure that the system is secure, reliable, user-friendly, and capable of supporting future improvements.
- Provide a clear technical structure that helps developers build and maintain the solution efficiently.
