## Coding & Solution

This section evaluates the quality and completeness of the implemented AI BlogNest API solution. The project provides a backend solution for secure user management, blog management, AI-assisted content functionality, content organization, and REST API access.

## Solution Summary

| Field                         | Details                                                                                                                                                            |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Repository Link / URL         | <a href="https://github.com/tejasarathy10/AI-Blog-Nest-API">https://github.com/tejasarathy10/AI-Blog-Nest-API</a>                                                  |
| Programming Language(s)       | JavaScript                                                                                                                                                         |
| Framework(s) Used             | Node.js, Express.js                                                                                                                                                |
| Database                      | MongoDB / Mongoose                                                                                                                                                 |
| Authentication                | JWT authentication and bcrypt password hashing                                                                                                                     |
| Key Features Implemented      | User registration and login; JWT-protected APIs; blog create, view, update and delete; AI-assisted blog ideas/content; categories and tags; search; error handling |
| Pending / Incomplete Features | Advanced AI personalization, cloud scaling, and complete frontend/mobile application can be considered future enhancements.                                        |
| Setup / Run Instructions      | Install Node.js and project dependencies; configure MongoDB and environment variables; start the Node.js/Express.js server; test REST API endpoints using Postman. |

## Code Quality Checklist

| S.No | Criteria                                               | Status (Yes / No) |
|------|--------------------------------------------------------|-------------------|
| 1    | Code is modular and organized into functions / classes | Yes               |
| 2    | Meaningful variable and function names are used        | Yes               |
| 3    | Code includes comments / documentation where necessary | Yes               |
| 4    | Error handling is implemented for critical operations  | Yes               |
| 5    | The application runs without critical errors           | Yes               |
| 6    | Code is committed to a version control repository      | Yes               |

## Additional Notes / Comments:

The AI BlogNest API is designed as a modular backend solution. The implementation focuses on secure authentication, blog CRUD operations, AI-assisted content features, content organization, search, database management, and REST API testing. The repository link should be added once the team's GitHub/GitLab repository is available.
